Product data sheet

VitalYouth

Product description

VitalYouth is ideal for vines that need to be replanted. The blend is specially tailored to give young vines the perfect start. It ensures that the plants root quickly, are optimally supplied with nutrients and develop natural resistance to environmental and stress factors.

Your benefits with VitalYouth

Optimal water and nutrient supply
Promotes growth through a targeted and balanced supply of water and essential nutrients.

Maximum resistance
Protects the young plants from water and nutrient shortage and supports pest defence.

Strong root development
Supports fast, strong root growth for a stable plant.

Increased resilience
The young plant develops natural defences against stress.

Areas of use

VitalYouth is made for planting new vines and replanting vines in viticulture.

Application rates

- Small vines: approx. 100 g
- High-stem vines: approx. 250 g

* These standard recommendations may vary depending on soil properties, crop and local conditions.

Application

The material is placed dry into a suitably enlarged planting hole. The vine is then planted, watered in with plenty of water and the planting hole is filled back up with soil.

Composition

(Typical ingredients based on dry matter)

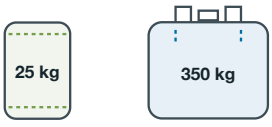

- Water and nutrient store
- Stable humus for lasting soil improvement: binds nutrients, keeps them available to plants and buffers the pH value
- Silicon granules: store additional water, loosen and aerate the soil and supply silicon to strengthen the plant
- Clay granules: store nutrients such as nitrogen and potassium, reduce their leaching and release them gradually to the plant
- Soil activators to support strong, healthy plant growth by promoting biological activity in the soil

* The exact combination of materials and their quantities are internal company information and are not made public.

Storage

Store dry, frost-free and not permanently above 50 °C. Do not leave bags in direct sunlight or in the rain. Always keep bags closed and use opened bags promptly. The material must be worked into the soil no later than 10 days after delivery.

Delivery form

Safety

- Keep out of reach of children & animals
- Do not breathe dust
- Only suitable for the intended purpose

Status: October 2026 · Version 2.0
